

螢火蟲棲息地 Firefly habitat

【內文 Content】

螢火蟲是環境指標昆蟲，近年來棲息地遭受光害、濫墾、農藥、水污染影響而逐漸減少。

保護棲息地首重水土保持，場內常見的螢火蟲有黑翅螢、端黑螢、山窗螢等，每年四月到九月出現。

Fireflies are environmental indicator insects, and their habitat has gradually decreased in recent years due to light damage, indiscriminate reclamation, pesticides and water pollution.

The common fireflies in the field include *Luciola cerata*, *Luciola gorhami*, *L. analis fabricius* and mountain window glow, which appear from April to September every year.
