

## 漿砌石溝 Wet Masonry Ditch

### 【內文 Content】

何謂漿砌石溝？

What is a wet masonry ditch?

漿砌石溝採用卵石襯砌，背填混凝土所構成。其功能可將地表逕流有效引導、分流或排至下游安全地點而施設之構造物。常適用於農地排水系統、道路邊溝、坡地社區排水等速度較大、土壤易沖蝕之處。

The Wet Masonry Ditch is lined with pebble and backfilled with concrete. Its function can effectively guide, divert or discharge surface runoff to a safe downstream location for construction of structures. It is often used in places where the drainage system of agricultural land, side ditches on roads, and community drainage on slopes are high and the soil is easy to be eroded.
